## Facts

- A secondary space frame system of long span floor trusses supported on eight exposed composite columns enables the building to further resist lateral moments (rotational forces).

- Reinforced concrete is used to frame the four below ground levels and above ground system up to the third floor. A massive reinforced concrete waffle system is used at the transition point with the braced frame structure to ensure forces are transferred efficiently.
- The structure uses an exposed 3D braced frame skeleton made up of eccentrically joined members to allow the building to resist primary lateral seismic movements.
